Indoor Air Quality

Enhanced - TS002-XXXMHz

✓ Temperature & Humidity ✓ CO2 ✓ TVOC ✓ Barometric Pressure ✓ Light Levels

Indoor air quality (IAQ) is a critical aspect of maintaining a healthy and productive workplace environment. Good IAQ encompasses the control of airborne pollutants, adequate ventilation, and maintaining optimal temperature and humidity levels. Effective IAQ systems help reduce the risk of health problems related to poor air quality. They continuously assess the levels of various pollutants, including carbon dioxide (CO2), volatile organic compounds (VOCs), particulate matter (PM), and ensure optimal air quality. Implementing a robust IAQ strategy is essential for businesses to foster a healthier, more comfortable, and more efficient working environment.

Your kit can include:-

- Visualisation & Reporting
- LoRaWAN Gateway
- 7 in 1 Ambience Sensor
- Configuration & Set Up
- Basic 12 Month Service - Monitoring

Optional Extras:-

- Cellular (Off Network)
- Additional Gateways/Sensors

Indoor Air Quality

Enhanced

Visualisation & Reporting

LoRaWAN Gateway an essential component for any IoT network, offering long-range, low-power communication capabilities perfect for connecting a wide array of devices. Its robust design allows for reliable transmission over several kilometers, ideal for both urban and rural deployments.

LoRaWAN Gateway

An essential component for any IoT network, offering long-range, low-power communication capabilities perfect for connecting a wide array of devices. Its robust design allows for reliable transmission over several kilometers, ideal for both urban and rural deployments.

7in1 Ambience Sensor

The ambient monitoring device is ideal for a wide range of environments. This sensor is designed to track multiple environmental parameters, including temperature, humidity, light, and CO2 levels. Its perfect for ensuring optimal conditions in spaces like offices, homes, schools, or healthcare facilities.

Configuration & Set Up

Our Configuration and Setup service is designed to seamlessly integrate the LoRaWAN Gateway and devices into your network. We handle everything from initial setup to fine-tuning the system for optimal performance.

Basic 12 Month Service - Monitoring

Our Basic 12-Month Service offers you continuous monitoring and maintenance. This package includes core system updates to ensure optimal performance and security, along with convenient email notifications to keep you informed about your system's status.
